Trinity Consultants

This Decision Tree is designed to assist you in identifying which of the four BREEZE ESP+ modules will best fit your needs, and determine whether you should consider adding the Sitewide Rolling Emission Report add-on to your subscription. In addition to walking through these questions, we encourage you to review the BREEZE ESP+ module comparison table here, and to contact our Sales Team at breeze@trinityconsultants.com or +1 972.661.8881 for further confirmation or with any questions.

Module recommendation

Add-on recommendation

Do you need to solely calculate emissions from tanks, or from tanks as well as any of the following sources: Catch Pans, Combustion Units, Control Devices, Equipment Leaks, Line/Vessel Openings, Loading Operations, Sumps/Oil-Water Separators, Vacuum Trucks and User Defined Sources.

I need to solely calculate emissions from floating and/or fixed-roof tanks.

I need to calculate emissions from floating and/or fixed-roof tanks, as well as from at least one of the other sources mentioned above.

BREEZE ESP+ PRO is the only edition that can calculate emissions from these non-tank sources, so BREEZE ESP+ PRO is the ESP+ module that best fits your needs.

Now, let's wrap up by determining whether or not the Sitewide Rolling Emission Report add-on should be included in your BREEZE ESP+ PRO subscription.

The Sitewide Rolling Emission Report is an optional tool, available for purchase separately, that automatically combines emissions from all tank and non-tank sources at a site and calculates the monthly rolling sum, including speciation.

Without this add-on, users managing multiple tank and non-tank sources must manually merge emissions data and calculate the rolling sum - a process that can be both tedious and time-consuming. By adding the Sitewide Rolling Emission Report to your subscription, you can streamline your workflow and focus on higher-priority tasks while BREEZE ESP+ handles the heavy lifting.

Do you want BREEZE ESP+ to automatically combine emissions from all tank and non-tank sources at a site and calculate the monthly rolling sum, including speciation?

Yes

The Sitewide Rolling Emission Report should be included as an add-on to your BREEZE ESP+ PRO subscription.

No

You can proceed with your purchase of BREEZE ESP+ PRO without adding the Sitewide Rolling Emission Report to your subscription.

BREEZE ESP+ TankESP LT, ESP+ TankESP FX, and ESP+ TankESP PRO are the choices you should consider. Now, let's figure out which of these three modules best fits your needs.

Do you need to calculate emissions from floating roof tanks?

Yes

BREEZE ESP+ TankESP LT and ESP+ TankESP PRO are appropriate options in this case as they are capable of calculating emissions from both floating and fixed-roof tanks. BREEZE ESP+ TankESP FX is solely used for fixed-roof tanks so this module will not be a good fit. Now, which of these two best fits your needs - let's find out!

Do you need to account for any of the following when calculating emissions: Access to Old 2006 AP-42 calculations; Mid-month change of services; Floating roof landings; Tank cleanings; Flashing losses; Short-term emissions; Custom reports.

Yes

BREEZE ESP+ TankESP PRO is the right choice for you, because BREEZE ESP+ TankESP LT does not include these capabilities.

No

Do you want access to the BREEZE Support Team?

Yes

BREEZE ESP+ TankESP PRO is the right choice for you, because BREEZE ESP+ TankESP LT does not include these capabilities.

No

BREEZE ESP+ TankESP LT will fit your needs. This is a basic, light tanks module with limited functionality compared to BREEZE ESP+ TankESP FX and ESP+ TankESP PRO.

NOTE: ESP+ TankESP LT does not include access to technical support. If you encounter any support-related questions, our Support Team can assist you on a consulting basis at that time.

Now, let's wrap up by determining whether or not the Sitewide Rolling Emission Report add-on should be included in your BREEZE ESP+ TankESP PRO subscription.

The Sitewide Rolling Emission Report is an optional tool, available for purchase separately, that automatically combines emissions from all tank and non-tank sources at a site and calculates the monthly rolling sum, including speciation.

Without this add-on, users managing multiple tank and non-tank sources must manually merge emissions data and calculate the rolling sum - a process that can be both tedious and time-consuming.
