01

WHO WE ARE

Trinity Consultants is a global leader in environmental consulting and technology, offering innovative solutions in EHS regulatory compliance, built environment, life sciences, and water and ecology sectors. Since 1974, we've combined technical expertise with deep industry knowledge to help clients navigate challenges and achieve sustainable success across natural, scientific, and built environments.

Our comprehensive compliance solutions empower businesses to minimize disruptions, digitize and optimize systems, accelerate product development, address stakeholder concerns, and drive strategic objectives.

With a global presence and a commitment to excellence, Trinity Consultants is dedicated to delivering high-quality technical work and exceptional client service, ensuring sustainable success for our clients worldwide.

Our Digital Solutions team combines deep Environmental, Health, Safety and Sustainability (EHSS) domain expertise with proven IT strategy to help organizations select, implement, and optimize the right digital solutions for their business.

We work at the intersection of compliance and digital transformation, bridging the gap between where you are today and where you need to be tomorrow.

Whether you are replacing spreadsheets, modernizing legacy systems, improving data integrity, or scaling enterprise platforms, we design practical solutions that fit your operations and deliver measurable results. No tech jargon. Just tailored, scalable solutions that reduce risk, enable processes, and drive efficiency.

Our goal is simple: help clients turn complex data into actionable insight so they can operate smarter, safer, and more sustainably.

02

OUR EXPERTISE

Industry-Smart, Tech-Ready

Our expertise spans both EHSS compliance and digital transformation, giving us a unique perspective on how the two intersect. That perspective helps us translate complex requirements into practical systems that both business users and IT stakeholders can support.

What Sets Trinity Apart

- We put strategy before software, aligning every technology decision to business goals, operational realities, and return on investment
- We are proudly platform agnostic and vendor-neutral, helping clients choose the right solution without bias or unnecessary spend

- We solve the visibility void by improving data quality, governance, and confidence in the information used for compliance, reporting, and decision-making
- We act as an embedded partner, an extension of your team from kickoff through adoption and beyond
- We build for tomorrow by connecting today's systems with future operational, regulatory, and disclosure needs

Capabilities

Our experience spans a broad range of EHSS and operational use cases, including:

- Compliance management and assurance
- Health, safety, and environmental data and process management
- Sustainability reporting
- Performance and operational risk management
- Quality and supply chain management
- Emissions data management, water and waste management, and regulatory reporting
- Incident management, behavioral safety, industrial hygiene, and occupational health
- Management systems digitization, governance, and audit support

Why it Matters

Organizations in heavily regulated sectors manage large datasets, complex calculations, and evolving reporting obligations. Trinity helps turn that complexity into clarity, so teams can manage with confidence and make decisions faster, with better information.

1

Bridging Compliance and Technology: We combine deep EHSS expertise with digital innovation to turn complex regulatory requirements into practical, scalable solutions.

2

Strategic, Vendor-Neutral Approach: We prioritize business outcomes over software, delivering unbiased guidance that maximizes value, efficiency, and return on investment.

3

From Data to Decision-Making: We transform fragmented data into trusted insights, enabling confident compliance, streamlined operations, and smarter, faster decisions.

03

OUR SERVICES

From Strategy to Transformation

From strategy to transformation, Trinity's five-step engagement process provides clarity, minimizes risk, and supports sustainable change at every stage.

Discover

We start from the inside out, assessing current-state processes, data, ownership, and stakeholder priorities to define what success looks like and where the biggest gaps exist.

Strategize

We align digital goals to organizational priorities, build the business case, and guide vendor evaluation and selection with objective, platform-agnostic recommendations.

Design

We design for client priorities first, software second, mapping workflows, roles, governance, prototypes, and solution architecture around the way the business actually works.

Deploy

We guide clients through configuration, integration, testing, training, and go-live with a practical approach that supports rapid adoption and minimal disruption.

Transform

We stay engaged after launch with training, support, audits, governance, and enhancements so the system continues to create value as operations and regulations evolve.

Digitization is complex. Clarity matters. Trinity's proven engagement process helps organizations assess current capabilities, align stakeholders, minimize implementation risk, and realize long-term value from their technology investments.

INDUSTRY

Data Centers

SUMMARY

Trinity was hired to align global EHS teams on implementing CorityOne across multiple companies. However, decentralized management led to inconsistent processes, stakeholder conflicts, and integration challenges with existing systems like asset and employee management.

To tackle this, Trinity:

- Planned meticulously with in-person sessions and weekly alignment calls
- Used a phased deployment over two-month cycles to minimize disruption and maximize functionality
- Balanced efficiency and collaboration with a waterfall-agile approach, resolving conflicting opinions
- Automated data migration using bulk import templates and APIs for seamless integration
- Drove adoption with region-specific training sessions and recorded resources

The result? CorityOne transformed EHS teams into digital powerhouses, streamlining operations, improving compliance, and providing global visibility. Trinity continues to support and optimize the platform, and the companies plan to expand its use.

Electric Power

SUMMARY

A global power company partnered with Trinity Consultants to modernize its EHS compliance system across eight natural gas plants.

The project started in March 2017 with a workshop to define goals and system needs. Before this, the company faced missed deadlines, lack of transparency, and inconsistent compliance, so a centralized platform became essential. Enablon's cloud-based risk management platform was chosen, and Trinity launched a pilot using Enablon's "QuickStart" program. The pilot included incident management, compliance tracking, work permits, hazard analyses, audits, inspections, corrective actions, and performance management.

Trinity and Enablon collaborated closely. Trinity handled regulatory expertise while Enablon managed the technical setup. By Q3 2017, over 250 users were trained and providing feedback. The full system was deployed globally by Q4 2018, improving visibility, efficiency, and risk management. In 2022, the company upgraded to Enablon Version 9, reporting better visibility, faster reporting, data-driven decisions, and stronger compliance confidence.

INDUSTRY

Chemical Manufacturing

SUMMARY

Trinity Consultants has supported a global specialty chemicals company since 2001. In 2021, the company adopted Wolters Kluwer's Enablon software to centralize environmental compliance and industrial hygiene data across its global sites.

Previously, compliance data was scattered in spreadsheets and local systems, making tracking difficult. Trinity led the implementation, addressing language and time zone challenges with translators and Enablon's tools.

Trinity automated data migration and configured Enablon to fit the company's needs. The IH module launched in February 2022, followed by the compliance reporting system in April 2022.

All sites quickly adopted the system, reducing manual work and improving accuracy. Dashboards provided real-time global insights, simplifying audits and risk management. Trinity continues to provide support and training, with plans to expand the solution further.

05

THE DIGITAL SOLUTIONS DIFFERENCE

Trinity launched the market's first dedicated EHS technology services business in 1995. Today, our Digital Solutions team continues to help organizations navigate complex EHSS requirements with practical, future-ready technology strategies.

We understand the regulatory landscape, the operational realities, and the technology constraints that shape implementation success. That perspective helps us ask smarter questions, solve the needs of both IT and the business, and deliver solutions people actually use.

- Deep expertise in both EHSS compliance and advanced IT solutions
- Transparent, vendor-neutral recommendations
- Seamless integration of new technologies and legacy systems
- Data accuracy, efficiency, and governance to support compliance and disclosure confidence
- A proven track record across energy, manufacturing, transportation, life sciences, and other regulated sectors
