

Trinity Consultants is a leading global environmental consulting firm that brings 50 years of experience providing services and solutions in the EHS Regulatory Compliance, Built Environment, Life Sciences, and Water & Ecology markets. Trinity has the technical expertise, industry depth, and specialized capabilities to help clients achieve their goals across the natural and built environments.

Organizations across manufacturing, infrastructure, chemicals, energy, and other highly regulated sectors are under increasing pressure to produce sustainability data that is accurate, consistent, auditable, and decision-ready. Evolving disclosure frameworks, including CSRD and IFRS Sustainability Disclosure Standards, are raising expectations for transparency, governance, and assurance, while internal stakeholders need trusted insights that can scale across sites, regions, and business units.

To keep pace, organizations need more than a reporting tool. They need practical, scalable digital solutions that connect people, processes, and data, turning complex sustainability requirements into a governed system that supports compliance, improves visibility, and enables smarter decisions.

Trinity Consultants' Digital Solutions Team

Our Digital Solutions team works at the intersection of Environmental, Health, Safety and Sustainability (EHSS) compliance and digital transformation. We combine cross-functional subject matter expertise, business process engineering, and technology best practices to help organizations plan, design, implement, adopt, and optimize digital systems that improve visibility, strengthen governance, and deliver long-term value.

Our Enablon Sustainability Services

For Trinity's customers using Enablon, our team of Enablon-certified experts are available to support every step of the journey from sustainability data management program design, to Enablon system implementation, to Enablon system enhancement and sustainment, and beyond.

Enablon is a cloud-based platform that allows users to centralize sustainability data, standardize calculation logic, and automate data collection, validation, and approval workflows across facilities and regions. Through configurable dashboards, reporting tools, and audit-ready data structures, Enablon's award-winning cross-functional software platform empowers organizations to move beyond manual, spreadsheet-driven reporting toward a governed, scalable sustainability software system. The platform supports

consistent methodologies, improved data quality, and enterprise level data visibility, helping organizations meet evolving disclosure requirements, strengthen sustainability governance, and drive measurable performance improvement across the organization.

Trinity helps clients make Enablon work for their business. Our Enablon Sustainability Services are designed to meet organizations where they are today while also preparing them for future regulatory, operational, and disclosure requirements. We tailor each engagement to the organization's regulatory profile, operational complexity, data landscape, and sustainability goals, helping teams to manage their data with confidence and enabling them to make better decisions based on trusted information.

Purpose-Built Configuration & Deployment

Trinity delivers sustainability solutions that enable organizations to manage emissions, energy, and other sustainability-related data within a single system, or through an integrated ecosystem of software systems. Our Enablon Sustainability deployments support the full spectrum of sustainability reporting needs including Scope 1, Scope 2, and Scope 3 emissions; air and mobile source emissions; utility data management; and management of performance against voluntary or required reduction targets. Trinity's standard implementation methodology aligns with Enablon- and industry-standard best practices for designing and configuring sustainability solutions within Enablon, resulting in a lower cost to the customer for initial implementation, lower maintenance costs, and overall lower cost of ownership over time. The result is a unified data management solution that supports and facilitates regulatory disclosures, voluntary reporting, and internal tracking of performance against organizational targets.

Sustainability Strategy & Road Mapping

We partner with organizations to define a clear, defensible sustainability roadmap that aligns regulatory requirements, corporate strategy, and operational realities. Services include:

- Sustainability maturity assessments
- CSRD, IFRS, and voluntary reporting readiness support
- Scope 1, 2, and 3 boundary definition and methodology design

This strategic foundation ensures Enablon is implemented as a business system, not just a reporting tool.

Harmonizing Disparate Data into Enablon

A core focus of our work is helping organizations transition from fragmented spreadsheets and other data tracking workflows into governed, auditable software solutions. Our teams:

- Inventory and assess existing data sources, spreadsheets, and calculation approaches
- Standardize emission factors, calculation logic, and data mappings
- Design smart, sustainable Enablon configurations that support both site-level data entry and enterprise reporting
- Migrate and validate historical data to preserve continuity and trend analysis

By centralizing sustainability and environmental data, organizations gain confidence that reported results are consistent, defensible, and repeatable across the enterprise.

Optimization, Enablement & Ongoing Support

Our services for your Enablon solution extend well beyond go-live. Trinity supports our customers' long-term success through:

- Administrator and user enablement and training
- System optimization and enhancement planning
- Support for evolving regulations and disclosure requirements
- Organizational change management support, including for mergers, acquisitions, and divestitures
- Expansion into additional sustainability, environmental, or audit use cases

By embedding Enablon into day-to-day operations and governance, and by supporting the evolution of our customers' sustainability programs and software solutions over time, we help organizations realize lasting value from their sustainability investments.

Work with a Preferred Partner

As a certified, preferred Enablon services partner, Trinity Consultants brings deep domain experience, talent, and solution accelerators to your unique engagement. We help organizations maximize the value of Enablon by aligning solution design with business priorities, regulatory obligations, operational workflows, and long-term sustainability goals.

- **Discover.** We assess your organizational needs, reporting obligations, data landscape, stakeholders, and operational realities to define a strong foundation for implementation.
- **Strategize.** We develop a road map that aligns near-term requirements with long-term sustainability, governance, and technology objectives.
- **Design.** We collaborate with your team to create a practical solution blueprint, including workflows, data structures, reporting needs, integrations, and pilot or proof-of-concept activities where needed.

- **Deploy.** We support configuration, data discovery, migration, reporting, testing, training, and go-live readiness to promote adoption and minimize disruption.
- **Transform.** We remain engaged after launch to optimize the system, support users, strengthen governance, and help your Enablon solution evolve with changing business and disclosure requirements.

Why Partner with Trinity?

Trinity brings a rare combination of sustainability strategy, regulatory expertise, industry knowledge, and Enablon implementation experience. Our teams understand both the rigor required for assurance and the operational realities faced by complex, global organizations.

The result is a sustainability management solution that helps organizations improve compliance, reduce risk, increase efficiency, and strengthen long-term performance, today and into the future.
