

Providing Environmental Support for Ireland's First Underground Metro

CHALLENGE

MetroLink will be the first underground transport system for Ireland with the ability to transport 53 million Passengers by 2060. AWN was tasked to provide detailed and robust environmental assessments to support the planning application process of the Railway Order.

SOLUTION

AWN delivered a range of key environmental impact assessments including monitoring, modelling and mitigation design to control environmental impacts above and below ground. Our team provided expert witness services at the oral hearing.

RESULT

The EIAR was submitted in 2022 to An Bord Pleanála and a 6 week oral hearing was held in early 2024.

Permission is pending for this project with a successful grant of permission hopeful in 2025.

Transportation is the nervous system of any modern society, but advancements often impact the environment in unexpected ways. MetroLink is a proposed high-capacity, high-frequency rail line running from Charlemont to Swords via Dublin Airport, with 16 stops. It will integrate with other public transportation services, such as Irish Rail, DART, Luas, and bus services, to provide a fully integrated public transport system in the Greater Dublin Area.

CHALLENGE

MetroLink will be a mainly underground rail system (a first for Ireland), with the 18.8km rail line connecting north and south Dublin. The operation of the MetroLink will offer reliable transport to estimated 53 million passengers every year by 2060 while helping to decarbonize the transportation sector and improve the quality of the urban environment in Dublin. The construction of the project will encroach close to very sensitive communities and across sensitive underground features and once operational, will require strict environmental controls to ensure no significant impacts occur.

SOLUTION

The MetroLink team turned to AWN Consulting Ltd., a Trinity Consultants team, to undertake a range of environmental assessments to identify, mitigate and manage potential key impacts and to support the planning process for the grant of a Railway Order. AWN Consulting started on the project in 2018 and undertook a range of detailed baseline investigations and monitoring programmes, detailed 2D and 3D modelling, environmental impact assessment reporting and offering expert witness services at the oral hearing. AWN provided expert assessment on the following areas::

- ▶ Air Quality;
- ▶ Climate;
- ▶ Airborne Noise;
- ▶ Hydrology; and
- ▶ Hydrogeology

AWN Consulting worked as a sub-consultant to Jacobs Ireland on the Environmental Impact Assessment Report (EIAR), which was crucial for understanding and mitigating potential impacts on the environment and surrounding communities.

RESULT

The EIAR was submitted in September 2022 to An Bord Pleanála and a 6-week oral hearing was held in early 2024. A decision is yet to be made on the granting of a Railway Order for the project, however the client is confident that, with the expert help of AWN Consulting, a positive result will be forthcoming for this exciting project.

ABOUT TRINITY CONSULTANTS

Trinity Consultants, a leading global environmental consulting firm, provides services and solutions in the EHS Regulatory Compliance, Built Environment, Life Sciences, and Water & Ecology markets. Founded in 1974, Trinity has the technical expertise, industry depth, and capabilities to help clients achieve their goals across the natural and built environments.
